

TheA++ MR/MN CR/CN

From the evolution of Thea an even more perfect and reliable boiler is born: the new TheA ++. The innovative electronic control board with microprocessor able to manage the system so that it always works with maximum efficiency and minimum waste, allows users to interface with compatible systems using the most efficient and current "M-BUS" communication protocols. TheA ++ features the Monometal aluminum condensing heat exchanger from "Gruppo Imar": the large beating heart that allows high yields and maximum ease of maintenance over time. Components of excellence complete a boiler that cannot be missing where the needs for home comfort are high, as is the interest in a clean, elegant and livable environment.
